Agenda

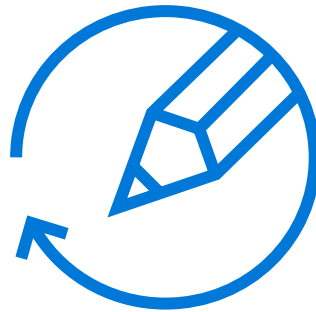

External Collaboration

A key ingredient for the success of your organization

Global Teams

Gig Economy

Work From Home

Need for open and dynamic collaboration across your organization and partners

Communication Applications in Microsoft 365

Outlook

Teams

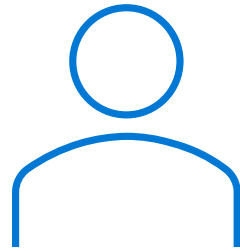

Yammer

Guests by the numbers...

30M

Guests provisioned
through Microsoft 365
Groups

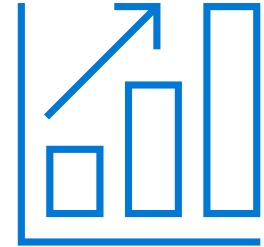

7.5M

Active guests through
Microsoft 365 Groups

98%

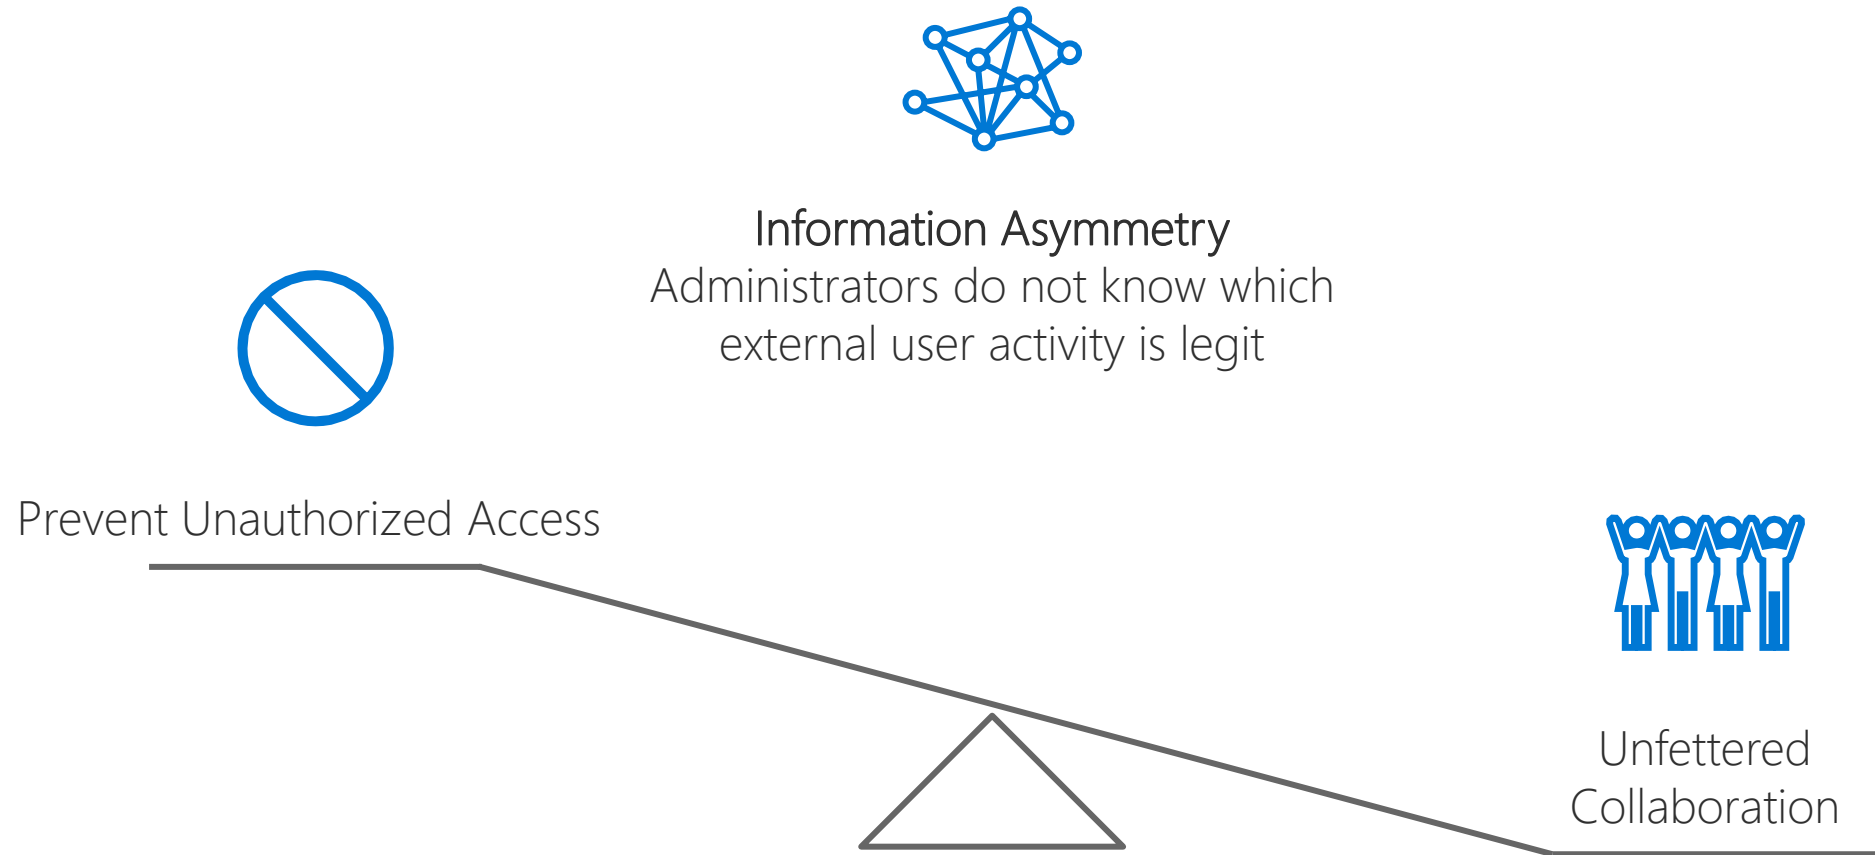

Tenants have guest access
enabled

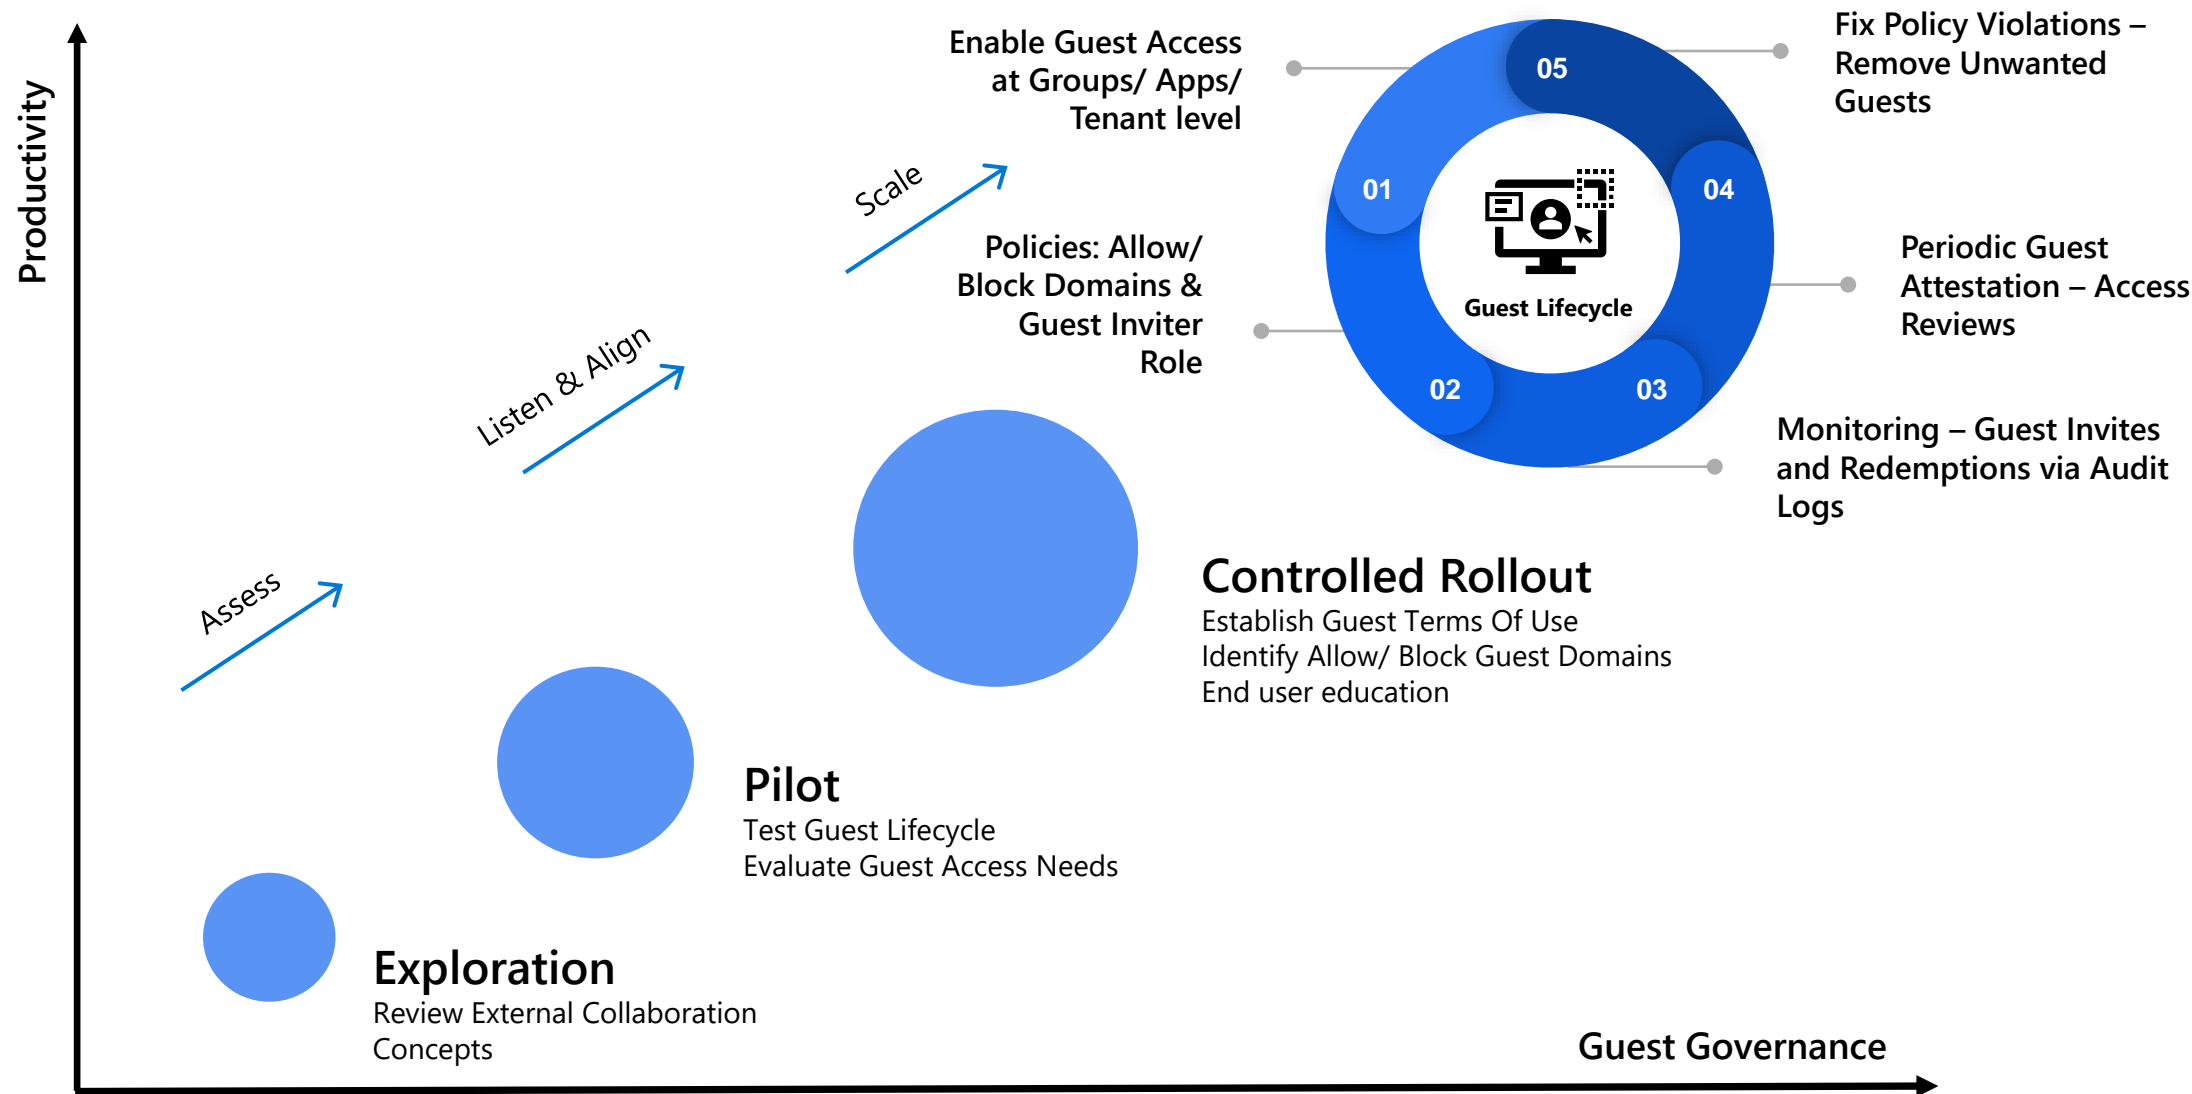

207%

Annual increase in guest
activity across Microsoft 365
Groups

Guest management – A balancing act

Guest lifecycle & adoption

Powering collaboration across work and life

Demo

Yammer

Private preview now live!

aka.ms/AcceptAzureB2BGuestsYammerPreview

Compliance

Gives administrator full control over your corporate data. Easy invite, redemption and lifecycle management for guests

Simplified Guest Modes

Easy to understand guest access mode and community access settings. Turn-key migration of old guest types to AzureB2B guests

Europe Geo Support

Unlocks External Collaboration for Europe Yammer Networks (Europe-to-Europe guests)

Works across all surfaces

Offers a seamless experience across all surfaces – Web & Mobile (Android and iOS)

Community resources

Gives guests the access to all community resources like files and documents on SharePoint

Unified Governance

Provides Microsoft 365 Groups based guest governance policies, common across Office 365 Apps like Outlook, SharePoint and Teams

Managing Guests at scale

[Allow/block guest domains](#)

[Guest inviter role](#)

Guest access – key questions

User Permissions

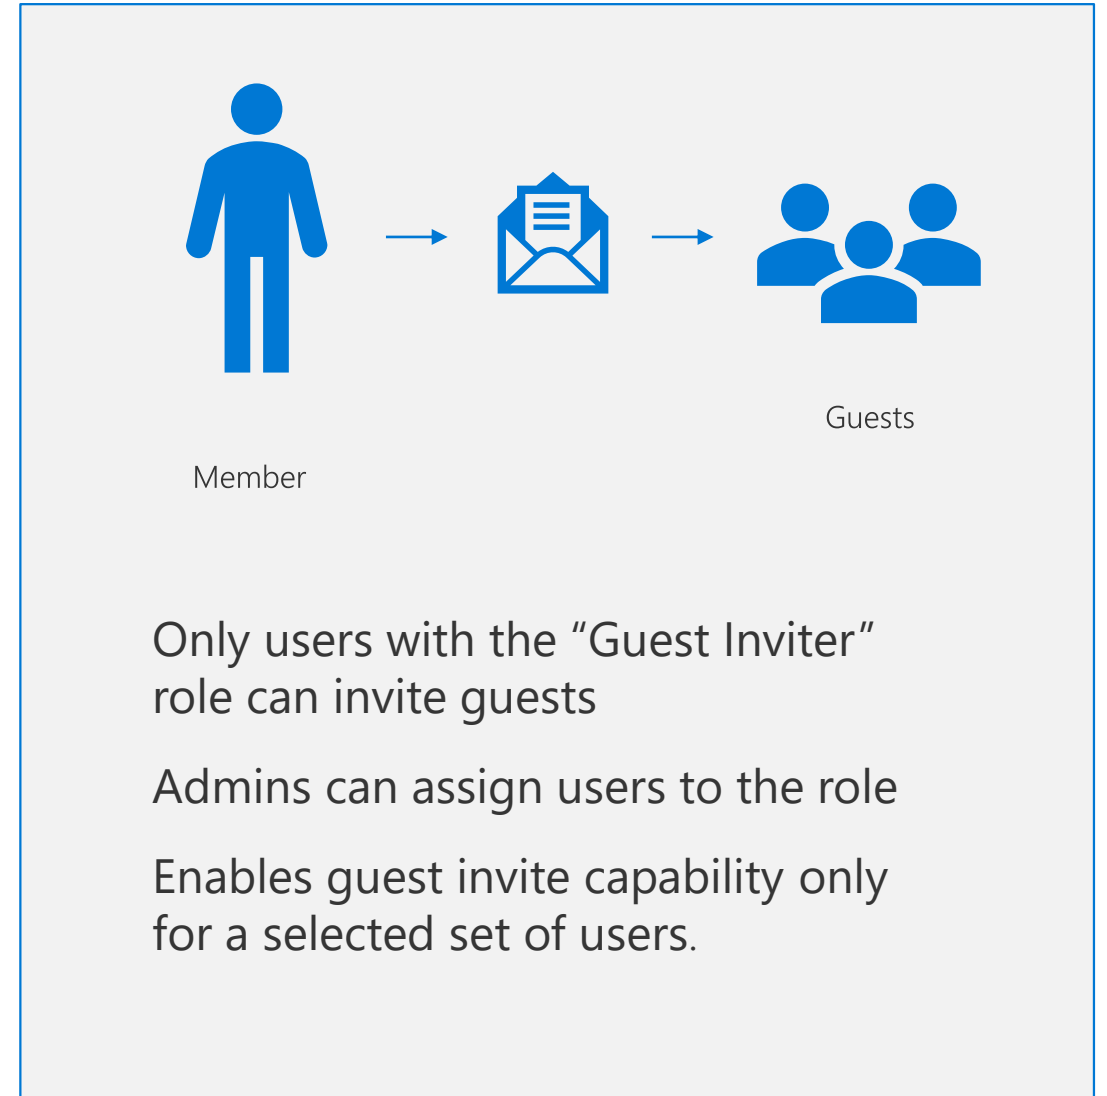

Provides a "Guest Inviter" role

Limits users who can invite guests

Can be configured using Active Directory

Helps prevent accidental invites for unwanted guests

Enables safe teamwork with external users

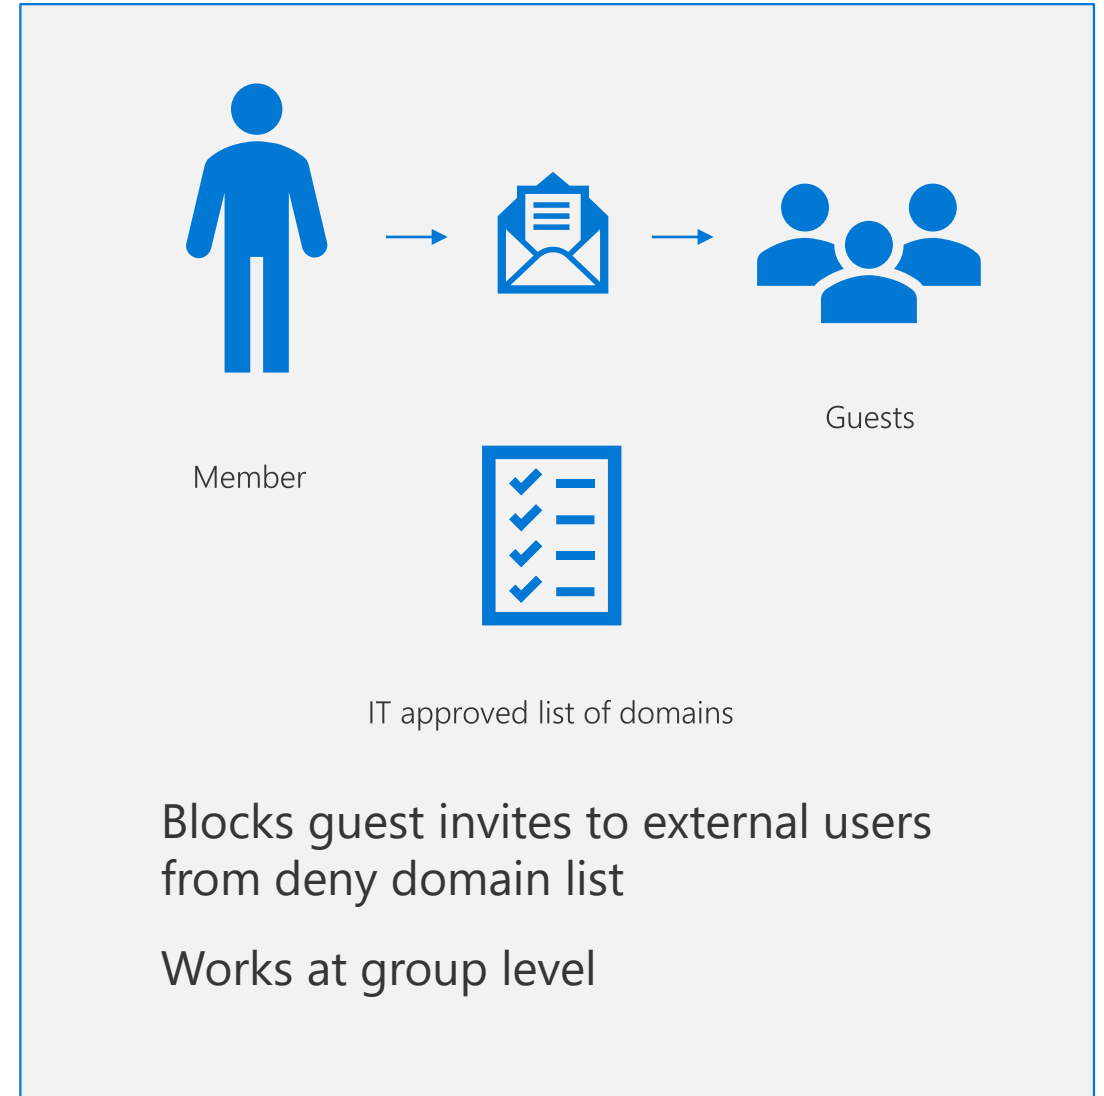

Domain Restrictions

Allow/deny list of external partner domains from which guests can be added

Available via both PowerShell and Azure Active Directory

Any existing domain policy in SharePoint can be easily migrated

Group Level Guest Policy

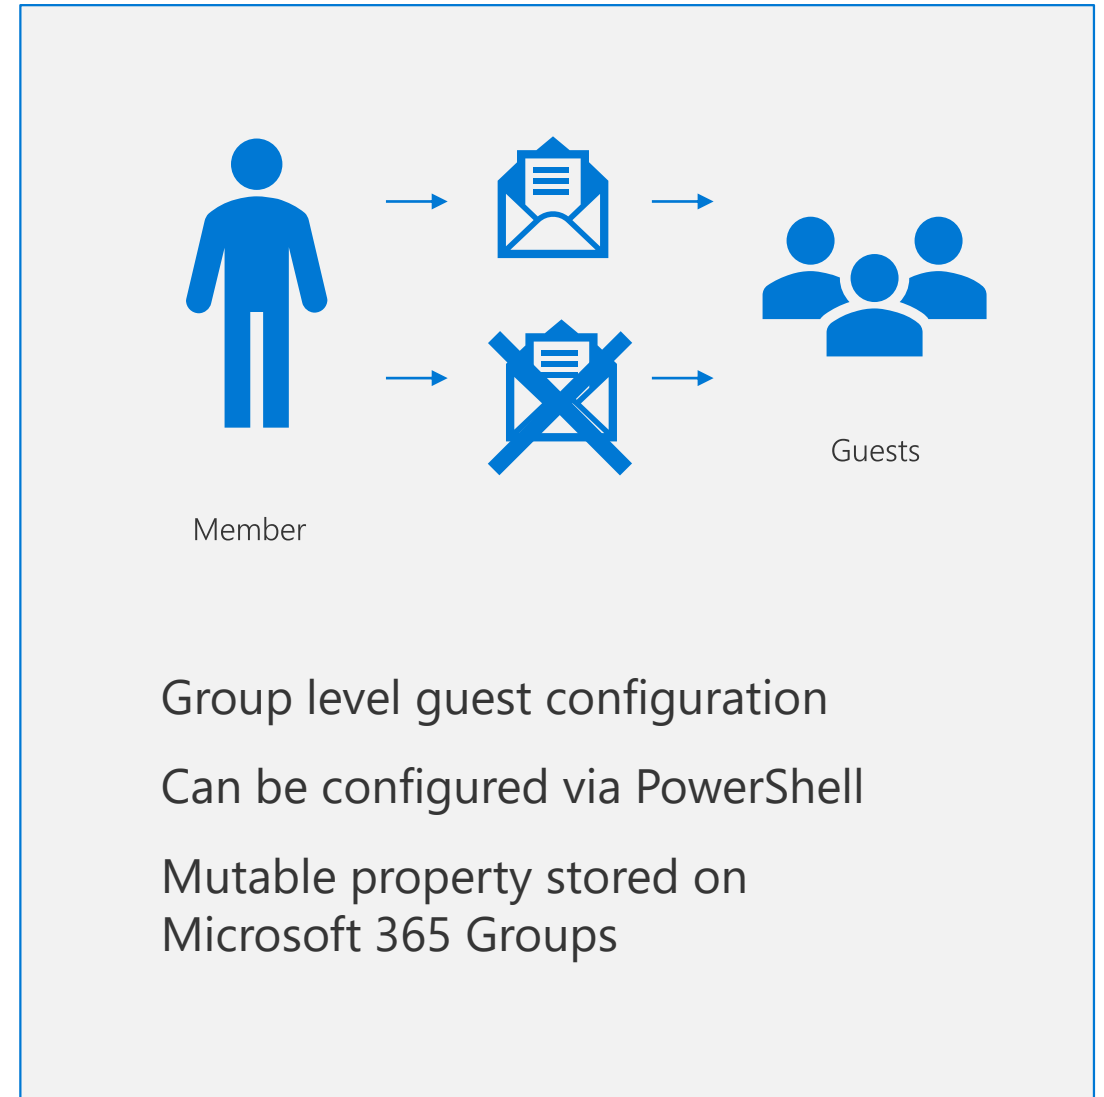

Granular group level control for guest access

Helps block guests access for sensitive groups

Mutable setting for Microsoft 365 Group

Can be modified based on evolving external collaboration needs

Documentation: [Guest Access in Microsoft 365 Groups](#)

Demo

Guest Policies

Sensitivity labels for guest governance

Benefits

Restrict who can create external and other high privilege groups
Labels helps you regulate guest access across your organization
Automatically enforce policies based on labels

Guidance

Start with new labels and define associated guest access privileges
Educate end users to think about scenario first instead of public/private/ guest enabled
Single set of labels across documents, emails and groups gives unified guest control

Demo

Sensitivity Labels for Guest Access

Entitlement management

Guests are automatically invited after being approved

Guests provisioned with time-limited access across apps, groups, Teams and sites

Guests removed when they no longer need access

Guest access reviews

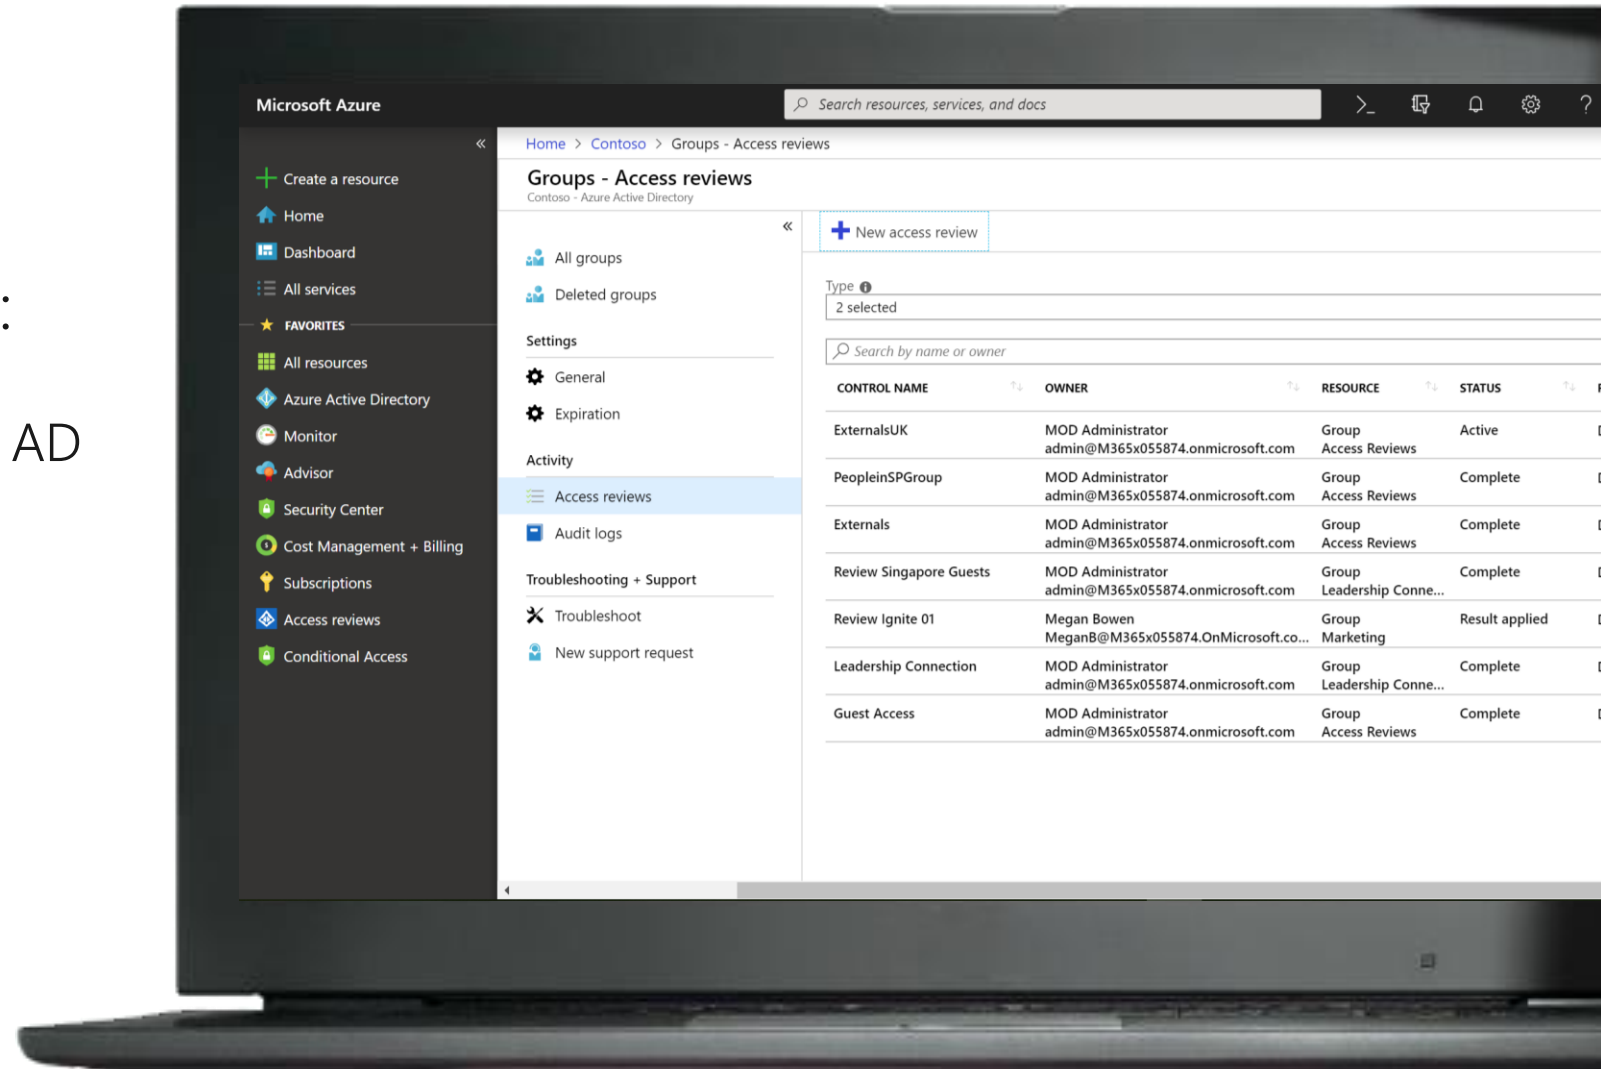

Define actions on your terms

Create policies per group

Actions are active immediately:

Guest is deleted from Azure AD

Guest sign-in is blocked

Demo

Entitlement Management

How does Microsoft manage guests

Empower employees while protecting content, keeping compliant and holding employees accountable

Guest Access is enabled for the tenant

All full-time employees can invite guests

No allow/deny domains configured for guests

Guest Usage guidelines shown in simple language

Guests Lifecycle

Membership reviews for groups with external members (access reviews)

Classification configured in Azure AD to manage guest access; Highly Confidential, Confidential (default), General

Custom jobs set Privacy to Private and disable external membership/sharing based on classification

Key resources
